

How My Sphere Works

This guide will show you how to use the My Sphere tool

How it works

The My Sphere tool is designed to demystify the networking experience by providing insightful data to help you achieve your networking goals.

Once the widget loads, it will show you a personalized list of suggested connections for you to connect with under the **Who I Want to Meet** tab.

For people you have already met, you can easily keep track of them as well by clicking the **+My Sphere** button. These connections will show under the **Who I Know** tab.

Note: The people you add to your contact sphere will not receive any notifications that you have added them.
